RE: JUREK'S SMOKEHOUSE & MICRO-BLAZE FOG

In November of 2005, Jurek's Smokehouse was having problems with odor and grease build-up in the grease trap and the vent from his meat processing plant.

We recommended he start using Micro-Blaze FOG.

He added Micro-Blaze FOG to the drains from the plant to the grease trap and vent line. The odor disappeared almost immediately. In addition, there has been no noticeable grease build-up in the grease trap and drain lines.

Micro-Blaze FOG has eliminated the unpleasant odors and fills the plant with a clean, refreshing scent.

Micro-Blaze FOG keeps the drain lines flowing and reduces the grease build-up in the grease trap.

Micro-Blaze Fog breaks down and neutralizes the blood and other organics in the drain lines and grease trap and keeps working in the city collection system and wastewater plant.

Respectfully,
