## Case History: West Texas Tire Fire

*Fall 1998, Stamford, TX:*

Scene: Thirty acre fire of ground up, recycled tires in rows 40' high, 40' across and 30 yards long with 40' between rows, with rows running lengthwise of the acreage 2 deep.

Rows caught on fire – winds carried fire from one row to the next.

Local fire depts. had already pumped **one million gallons of water with 300 gallons of Forestry Class A foam**.... Had also used 100 gallons of AFFF.....Fire was *not being contained after 19 hours of burning*.

Verde Environmental rep Don Board was called in and brought 55 gallons of Micro-Blaze Out®. He hooked up to truck's in-line eductor setup, using **Micro-Blaze Out at 1/2%**. Upon application onto the burning piles, fires were contained and did not advance any further. Two entire end-piles had been completely extinguished when Don ran out of Micro-Blaze Out®.

*Contact:* Kyle Young / Stamford (TX) Fire Department.
