**"PARTNERING WITH NATURE FOR A CLEANER TOMORROW"**

## Product Details

### Appearance:

Tan Liquid

### pH:

7.0 - 8.0

### Shelf Life:

4 Years

### Storage:

Avoid temperatures over 48°C for long periods of time. Avoid prolonged freezing and multiple freeze/thaw situations.

### Packaging:

5 - Gallon Pail

55 - Gallon Drum

275 - Gallon Tote

## Other Micro-Blaze® Microbial Products:

Emergency Liquid Spill Control • FOG • Micro-Blaze Out® • AGRO • Budkicker • CSR Septic • Non-Formulated • Turf Care

# Micro-Blaze®

### AQUATIC POND TREATMENT

**Micro-Blaze® APT** is a synergistic blend of spore-forming microbes in liquid form that displaces pathogenic bacteria by competitive processes. Used by aquatic farming operations, **Micro-Blaze® APT** will virtually eliminate organic sludge, ensure good algal balance and color, and improve pond quality, resulting in improved harvest and fish health.

### Advantages:

- Reduces sludge produced by excess food and other organic waste
- Creates an optimal balance of phytoplankton and natural, beneficial microbes
- Less chemical use
- Reduced sludge levels result in reduced time required for harvesting
- Improved water quality results in better tasting fish

***"...Our catfish are healthier and taste better!"***

***- Catfish Farm***

***"...Our shrimp are bigger!"***

***- Shrimp Farm (Korea)***

***"...Our sludge was reduced from 3.0" to 0.75" after only 3 months!"***

***- Catfish Farm***

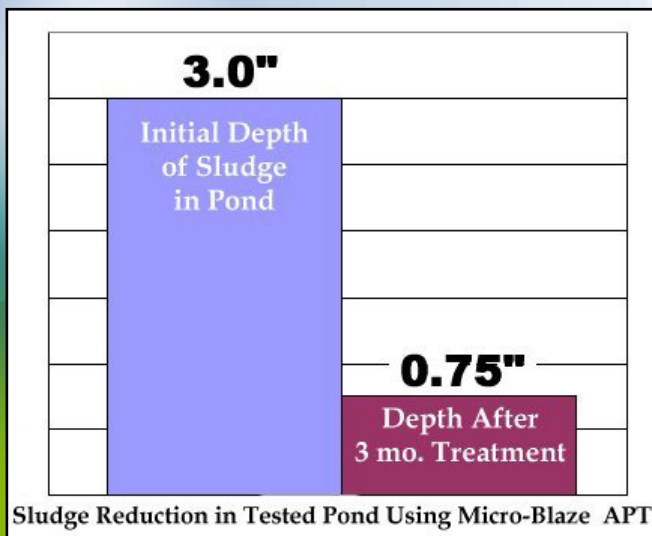

# Application Rates

## Dosing Guidelines:

1. **Initial Dosage:** In order to establish a bacterial population count dominance in an aquatic pond, we recommend as the initial dosage 1 gallon of **Micro-Blaze® APT** for each surface acre of pond water.

**Example:** For a pond with 10 surface acres, the initial dosage would be 10 gallons. The **Micro-Blaze® APT** should be added full strength directly into the pond just in front of the aerators, which will disperse the product throughout the pond.

2. **Maintenance Dosage:** 1 gallon per month (or 1 quart per week) of **Micro-Blaze® APT** needs to be added per 10 surface acres of pond water in order to maintain bacterial dominance and properly treat the pond. It should be added in front of the aerators.
